

Getting Started

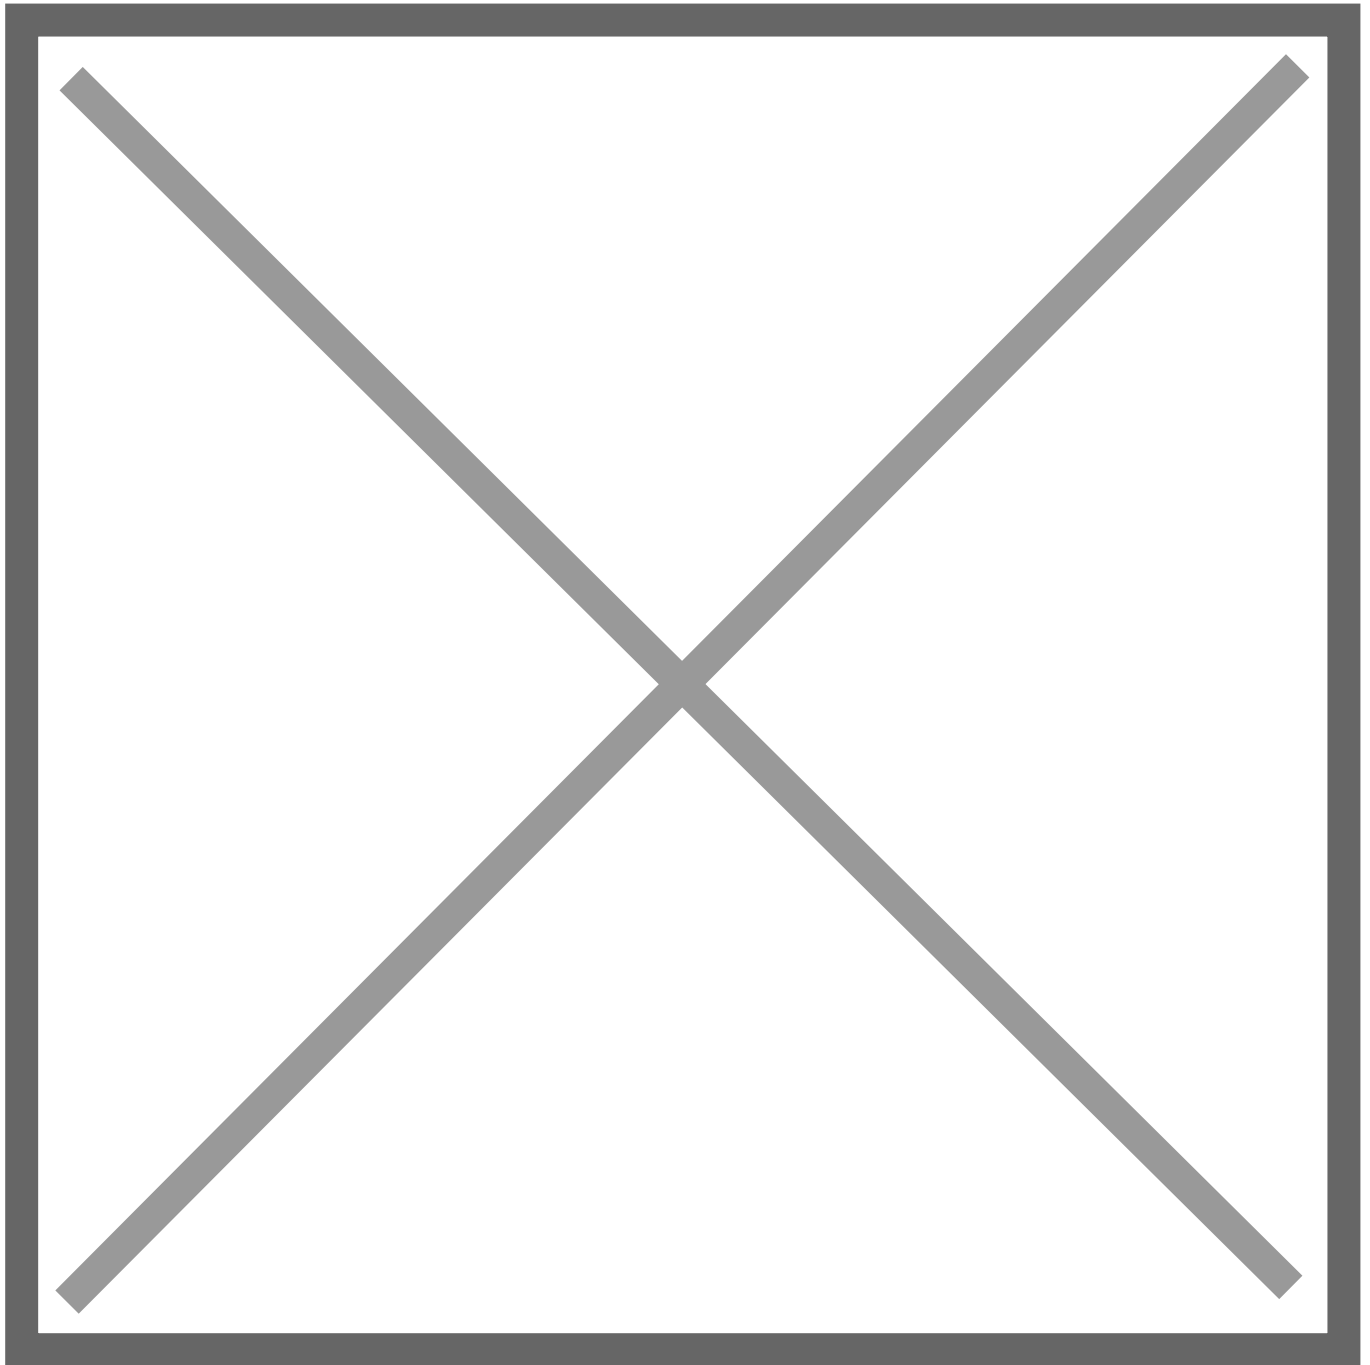

The login page provides secure access to the Kiyocrm system for registered users. It supports traditional username/password login as well as Google-based authentication.

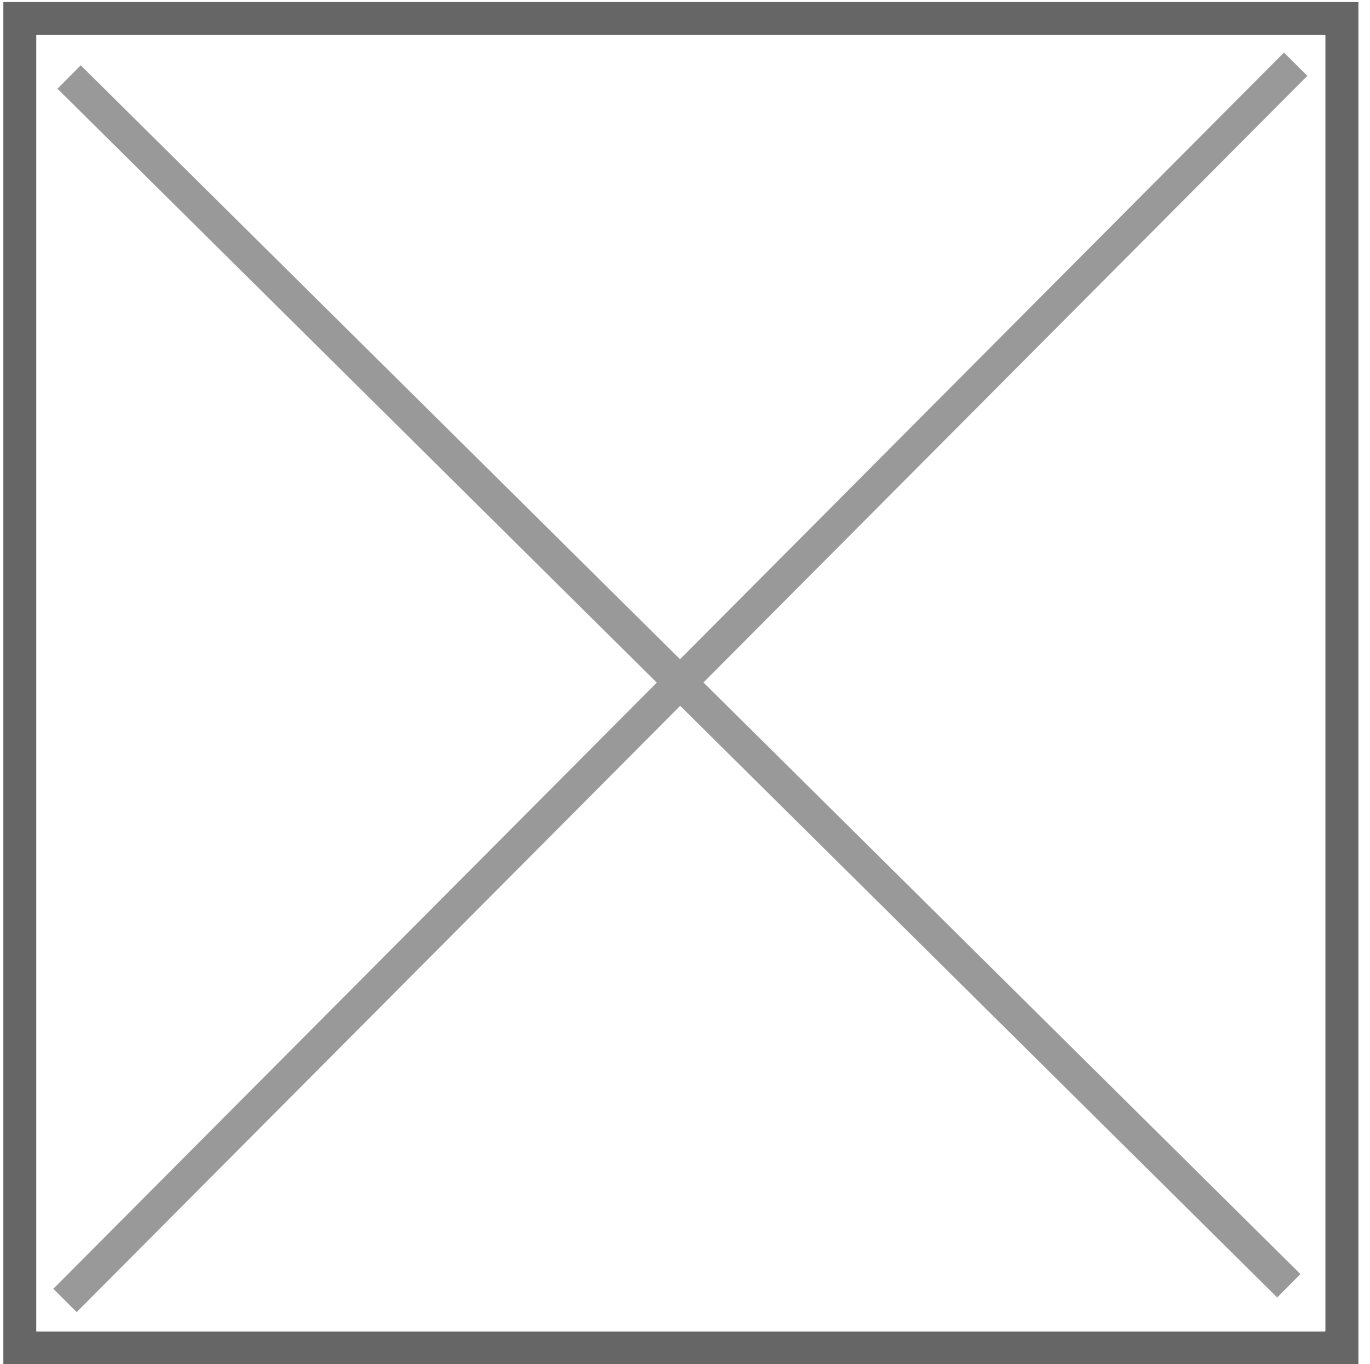

Username/Password Login: On clicking "Log In", credentials are validated on the server. On success, the user is redirected to the dashboard or home screen. On failure, an error message is shown.

Google Login: Redirects to Google OAuth and returns to the application with authenticated user details.

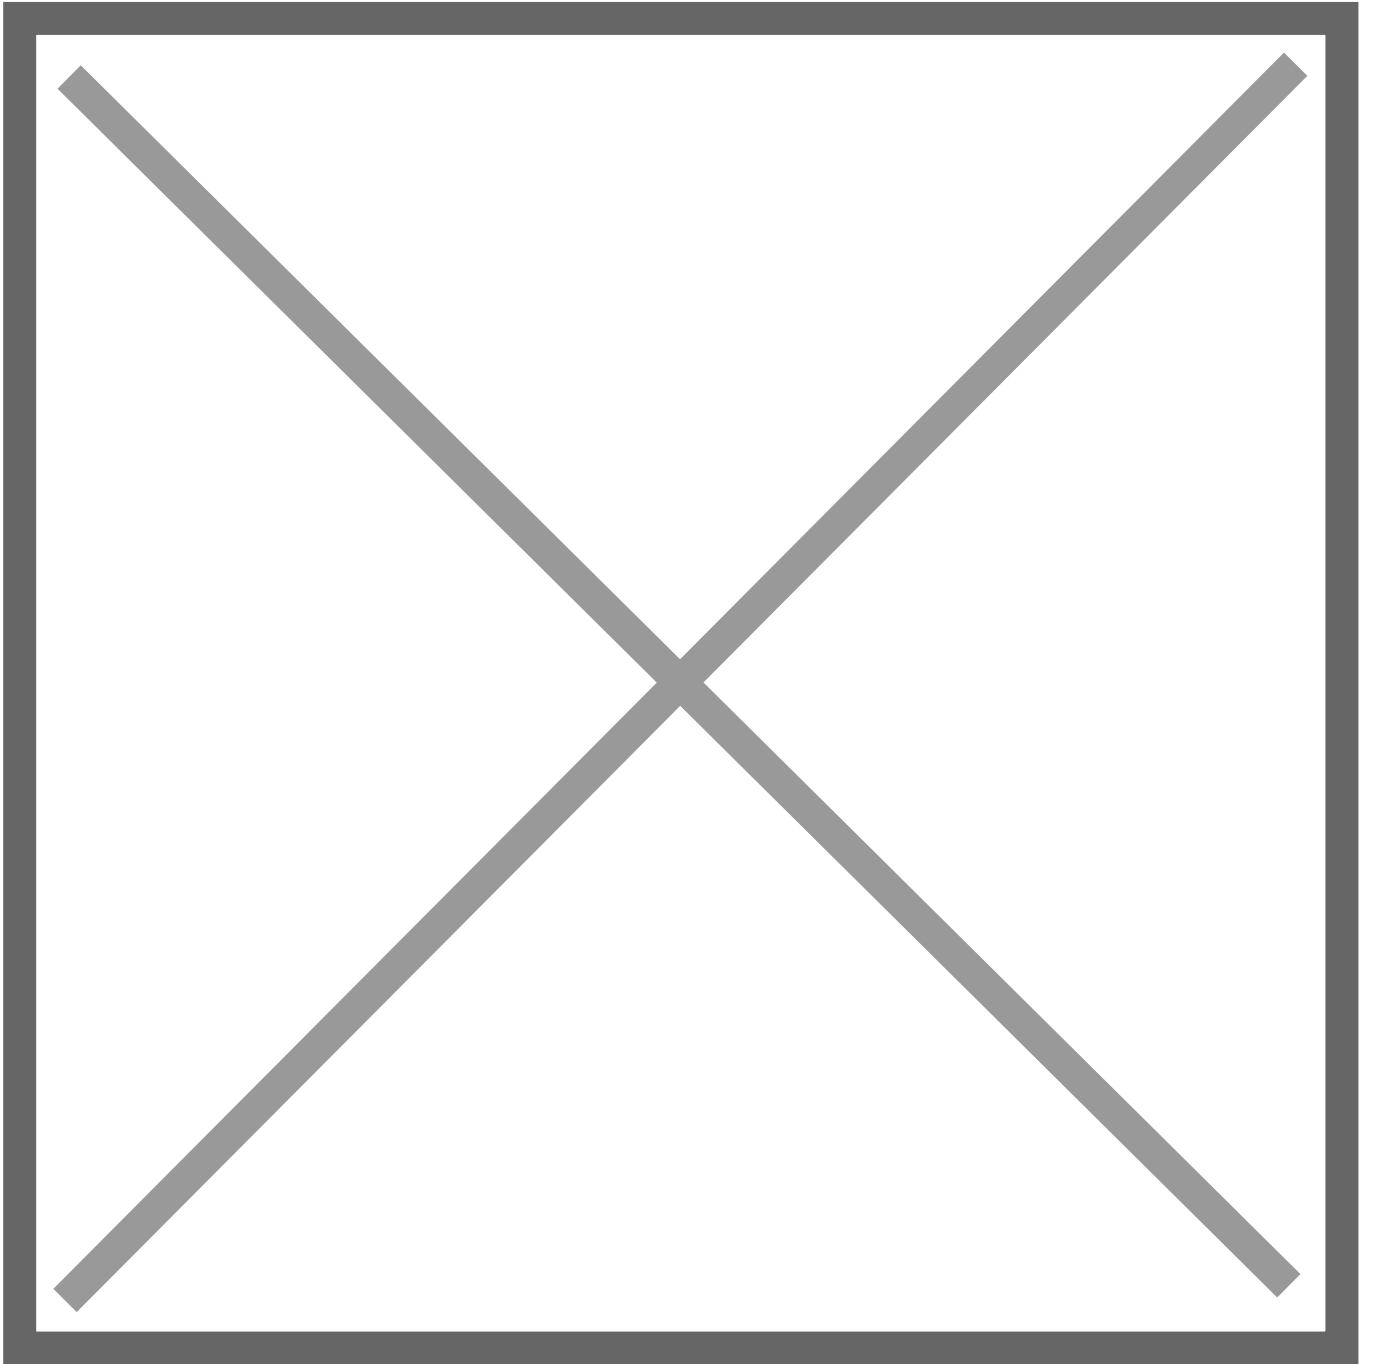

Forgot Password: Redirects to a password recovery process with Username and Email Address

Language Selector: Before logging into KiyoCRM, you can select the language you wish to use. There are many default languages for KiyoCRM and there are also additional language packs available for other languages around the world.

Once you have chosen your language and have entered your user credentials, you will be able to click Login to access KiyoCRM
